

Model No.:	FYLS-0402CXXC
Date / Rev.	2022.05.17 / C

PRODUCT SPECIFICATION

Model No.: FYLS-0402CXXC

Features:

- SMD Type
- Size (mm):1.00*0.50*0.45
- Lens Color: Water clear.
- ■Viewing Angle(20½):130°
- **■**SMT package
- ■Suitable for all SMT assembly and soldering method
- ■Pb-free Reflow soldering application
- RoHS Compliant
- MSL:4

Applications:

- **■Light Strips**
- ■LCD Backlight
- Decorative lighting
- Indicators
- Interior automotive
- **■**Illuminations
- Mobile Phones

Model No.:	FYLS-0402CXXC
Date / Rev.	2022.05.17 / C

■ Mechanical Dimensions

■ Recommend Soldering pad design(unit=mm)

Notes:

- 1. Dimension in millimeter, tolerance is ± 0.10 .
- 2.Angle:±5°
- 3. The specifications, characteristics and technical data described in the datasheet are subject to change without prior notice.
- 4. The drawing is different from the actual one, please refer to the sample.

- Soldering Characteristics-
- Reflow Soldering
- Lead Solder

• Lead-free Solder

Notes:

- 1.Although the recommended soldering conditions are specified in above table, reflow or hand soldering at the lowest possible temperature is desired for the LEDs.
- 2.A rapid-rate process is not recommended for cooling the LEDs down from the peak temperature.
- 3.All temperatures refer to solder Pad.

Hand Soldering

Soldering temperature	300℃ Max. (25W Max.)	One time olny
Soldering time	5 ±1sec	One time only

■ Handling of Silicone Resin LEDs-

Handling Indications

When handling the product, do not touch it directly with bare hands as it may contaminate the surface and affect on optical characteristics. In the worst cases, excessive force to the product might result in catastrophic failure due to package damage and/or wire breakage.

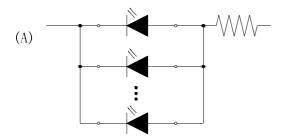

When handling the product with tweezers,LEDs should only be handled from the side and make sure that excessive force is not applied to the resin portion of the pordct. Failure to comply can cause the resin portion of the product to be cut,chipped,delaminated and/or deformed, and wire to be broken, and thus resulting in catastrophic failure.

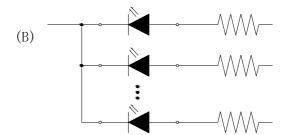

■ Recommended circuit-

• In designing a circuit, the current through each LED must not exceed the absolute maximum rating specified for each LED It is recommended to use Circuit B which regulates the current flowing through each LED. In the meanwhile, when driving LEI with a constant voltage in Circuit A, the current through the LEDs may vary due to the variation in forward voltage(VF) of the LEDs. In the worst case, some LED may be subjected to stresses in excess of the absolute maximum rating.

• This product should be operated in forward bias. A driving circuit must be designed so that the product is not subjected to either forward or reverse voltage while it is off. In particular, if a reverse voltage is continuously applied to the product; such operation can cause migration resulting in LED damage.

■ Storage-

- Storage Conditions
- 1.Unopened moisture barrier bag (MBB) shall be stored at temperature below 5 ℃~30 ℃, with humidity below 60%RH.
- 2.Before the MBB be opened, check if have the air leakage, if have, then need to bake at 65 ℃~70 ℃ for 24hours.
- 3.After the MBB has been opened, the LEDs which need for reflow soldering or other soldering methods, must be used according to below:
 - a: Must finish the soldering in 72hours
 - b: Stored with the humidity below 30%RH
 - c: If not finish the soldering in 72hours, need to bake the LED again at 65 ℃~70 ℃ for 24hours
